Projects

Sterile neutrino dark matter production mechanisms in presence of NSIs — **Dec 2020 - Dec 2021**

- Master thesis under the supervision of Prof. Dr. Achim Stahl and Dr. Werner Rodejohann.
- Studied the effect of scalar, axial-vector and pseudoscalar non-standard neutrino self-interactions on the Dodelson-Widrow mechanism with Majorana neutrinos and demonstrated that experimentally allowed neutrino NSSIs can lead to sizable shifts in allowed parameter space.

Optically controlled droplet transport platform — **Jul 2018 – Jun 2019**

- Bachelor thesis under the guidance of Dr. Subramanyan Namboodiri Varanakkottu
- Design and implementation of a novel lab-on-chip "optically controlled digital microfluidic device" for on-demand droplet transport and exploring its applications in biochemical analysis.
